

12-1-2014 TVA PROJECT UPDATE

The brief update on street lights on the approach to and over the bridge at the Fort Loudon Lake Dam is that TDOT cannot yet restore the power to the street lights because to do so could pose a risk to workers in the adjacent construction areas for possibly digging into buried power lines.

Note that the responsibility for the street lights on the bridge is the responsibility of the TVA Maintenance Department. The committee expects to hear from this department soon on the restoration of these lights.

In the interim, to improve visibility on the S-Curve area leading to the bridge from Lenoir City, at the request of the HOA Ad Hoc Committee, TDOT has hired a contractor to mark the road with reflective signs to help guide traffic through this area at night. The timetable for this is not yet firm, but, weather permitting, this work should be completed in the next few weeks.
